I DAS (Dot Adjustment System)

The function to adjust automatically the dot position and
the feed amount that affect print quality as the standard equipment.After changing a media and a printing condition,
the ink dot position and media feeding amount
must be adjusted accordingly.Since DAS automatically applies them, printing
can be performed without labor and variation of
adjustment by the operator (*1).

*1: Some media cannot be automatically applied.

DAS

It is the function to print a dedicated
pattern to the media and read by the
sensor mounted on the carriage to
adjust automatically:

- Dot position
(Dot jetting position at the bi-direction)
- Feeding amount
(Media feeding amount)

Improper dot position

I Mimaki's newly developed Eco-sol ink CS250

The CS250 boasts excellent safety and high quality,
which is evaluated by waveform created by a printer
manufacturer. One of the features is upgraded drying
property.It evaporates quickly after printing and print-outs dry
much faster, which prevents blocking and enables
reproducing in detail even images that need a lot of
ink.The CS250 is contained in one-liter bottle that allows
prolonged operation. it is a green product that abates
odor for a better operating environment.Mimaki

Combination of upgraded usability and functionality

1 PDF data with a lot of special effects embedded

2 Increases RIP processing speed of PDF data by 25% on average

3 Variable print function

4 Easy-to-check displays

Achieves HIGH QUALITY in image quality, functionality, and productivity

“MAPS4” supported (Mimaki Advanced Pass System) Banding reduction function

By printing the border of the path in a gradation tone, banding (horizontal stripes), uneven color, and glossy stripes are reduced to achieve smooth printing.

<MAPS OFF (Image)>

<MAPS ON (Image)>

Based on printing conditions such as media/ink type and resolution, the most suitable gradation pattern is automatically selected and printed.

Minimum ink size 4pl Beautiful print of less granularity feeling

Three different ink dot sizes are used in printing to enable high-quality print with reduced granular feeling.

<Normal dots>

<Variable dots>

Dots are combined with the minimum size of 4pl to enable smooth color printing with less granular feeling.

NCU/NRS employed to monitor missing nozzles

The sensor automatically detects the condition of nozzles. When the NCU (Nozzle Check Unit) detects a missing nozzle, it automatically performs cleaning. If there is a nozzle problem left unsolved by the cleaning, NRS (Nozzle Recovery System) automatically replaces the defective nozzles with other nozzles, and enables users to continue their operation without waiting for service personnel.
