About this manual

This manual explains how to set PC for installing RasterLink6 and the procedure for installing a printer driver in a client PC.

This document explains the installation procedure using Windows 7 as an example.

Unless otherwise specified, use the same procedure for Windows XP, Windows Vista, Windows 8.1 and Windows 10.

Notations

Menu items are enclosed in quotation marks like "Full Color".

Buttons in dialog box are framed like Close

This manual is based on RasterLink6 SG. Please replace software and printer names used in this manual with those of the software and printer you are using.

Symbol

Indicates a caution you must observe when operating the product.

Describes a useful procedure.

Method for printing from client PC

(Important!)

If using a PC with an OS that is Windows Vista or later as the RasterLink6 PC, set the password for the user accounting using the RasterLink6 PC.

Printing by using hot folder

RasterLink6 creates a "hot folder" for receiving image data on its installed PC. Dragging and dropping the image data onto this hot folder from a client PC enables data transfer to Raster-Link6.

Printing by using printer driver

When printing directly from applications such as Adobe Illustrator and Photoshop, use the printer driver created by RasterLink6. As with typical printer drivers, the printer driver created by RasterLink6 is specified.

Create the hot folder and the printer driver using either of the following methods.

- Create the hot folder and printer driver when registering the printer using the [Printer Management] function. ((Filmstallation Guide)
- Create the hot folder and printer driver using the [Favorite] function. (

Set PC with RasterLink6 installed

RasterLink6 PC is a PC on which RasterLink6 is to be installed or already installed. This is the explanation about necessary settings and the procedure of installation for operating RasterLink6 properly.

In this Installation Guide, the RasterLink6 PC host name is described as "RasterLink". Where the explanation mentions "RasterLink", substitute the host name of your RasterLink6 PC.

Install RasterLink6 and register the printer (@ Installation Guide)

Install RasterLink6 and then register the printer.

Change the setting to share folders and printers (\bigcirc P.31)

Change the RasterLink6 PC setting to connect and share folders and printers of client PC.

How to Open the Control Panel

Open the Control Panel window as follows.

Windows 10

Select [All apps] - [Windows System] - [Control Panel] in the Start menu.

The "Control Panel" window opens.

2 If "Category" is selected on "View by", change to "Large icons" or "Small icons".

When changed to "Small icons"

Windows Vista

1 Select "Control Panel" in the Start menu.

The "Control Panel" window opens.

2 If the Control Panel displays the Control Panel Home, click "Classic View".

All the Control Panel icons are displayed.

Windows XP

1 Select "Control Panel" in the Start menu.

The "Control Panel" window opens.

2 If the Control Panel is in the Category View, click "Switch to Classic View".

All the Control Panel icons are displayed.

Change the OS Setting

Change the Host Name

Set the host name (computer name) so that the RasterLink6 PC can be identified on the network.

When there are several RasterLink6 PCs on the same network, it is necessary to change the host names to unique names so that they do not conflict.

Here, the host name before being changed is "XXXX", and in the following example it is changed to "RIP-PC".

1 Double click [System] in [Control Panel].

2 Click the [Change settings].

If [User Account Control] screen is displayed, click Continue.

3 Click the [Computer Name] tab. Click Change.

4 Change the [Computer name], and click OK.

5 The confirmation screen appears.

OK . The PC is not

Click

restarted.

Set the Local Security Policy (with Windows 7 / Windows Vista)

If you plan to install RasterLink6 on a PC running Windows 7 or Windows Vista PC and use a MacOSX PC as a client PC to connect to the RasterLink6 PC via SMB, you need to change local security policies before installation.

If the RasterLink6 PC is in your domain network, you may not have to do this. For more information, contact your network administrator.

- Windows Vista Home Premium
- Windows 7 Home Premium
- **1** Double click "Administrative Tools" on [Control Panel].

(Important!)

[Administrative Tools] window opens.

2 Double click "Local Security Policy" on [Administrative Tools] window. The "User Account Control" screen is displayed, click Continue.

[Local Security Policy] window opens.

3 Select [Security Options] from [Security Settings].

Change the setting to share folders and printers

Set PC with RasterLink6 installed so that the networked client PC can access it.

Sharing and Discovery settings

This section describes how to configure your RasterLink6 PC to participate in a workgroup and to setup for sharing and discovery over the private network.

If you want to configure your RasterLink6 PC to participate in a domain network, or for information on your network, please contact your network administrator.

Windows 10/ Windows 8.1

1 Click [Network and Sharing Center] on [Control Panel]

2 Click [Change advanced sharing settings].

From the next step, change "Private" or "Guest or Public" depending on the network configuration.
Change the current network configuration setting being displayed.
If you have network administrator, ask him/her which setting to change.

A Set the following items.

- 1. Select "Turn on network discovery".
 - When you change "Private" settings, turn on "Turn on automatic setup of network connected devices."
- 2. Select "Turn on file and printer sharing".
- 3. When you change "Private" settings, select "Use user accounts and passwords to connect to other computers".
- **5** Open "All Networks" Set the following items.

1. Select "Turn off password protected sharing".

Change sharing options for different network profiles	
Windows creates a separate network profile for each network you use. You can choose specific options for each profile.	
Private (A)	
Network discovery	
When network discovery is on, this computer can see other network computers and devices and is visible to other network computers.	
Turn on network discovery

Enable file sharing (with Windows Vista)

When RasterLink6 starts up for the first time, the hot folder and PPD folder are automatically set for file sharing. However, with Windows Vista, if file sharing is not enabled, access from the client PC is not possible. The following is an example of enabling Windows Vista file sharing using the PPD folder automatically set for file sharing when RasterLink6 starts up for the first time.

1 Display the PPD folder on the Raster-Link6 PC.

2 Select the PPD folder and right click it.

Select "Share..." from the pop-up menu.

3 Click Share

If "User Account Control" screen is displayed, click Continue .

3. File Sharing	
Choose people to share with	
People without a user account and passw To change this setting, use the <u>Network a</u>	ord for this computer can access files you share with everyone. <u>nd Sharing Center</u> .
	• Add

1.Right Click	
2.Select	

3 If the screen at right appears, file sharing is not enabled. Click "If you understand the security risks but want to share files without running the wizard, click here".

If the screen in 4 appears, file sharing is already enabled so it is not necessary to change the setting.

To run the Network Setup Wizard, specialist knowledge of networks is required. If you are not confident about making network settings, do not run the Network Setup Wizard.

Select "Just enable file sharing".

PPD Properties		
General Sharing Customize		
Local sharing and security To share this folder with other users of this computer only, drag it to the <u>Shared Documents</u> folder. To make this folder and its subfolders private so that only you have access, select the following check box. Make this folder private		
As a security measure, Windows has disabled remote access to this computer. However, you can enable remote access and safely share files by running the <u>Network Setup Wizard</u> . If you understand the security risks but want to share files without running the wizard, click here.		
Learn more about <u>sharing and seer</u> ity.		
OK Cancel Apply		

4 When RasterLink6 starts up for the first time, the PPD folder is set for file sharing, so "Share this folder on the network" is checked. Without making any changes, click OK to close the screen.

Print from Client PCs

The following explains the settings for the client PC that accesses RasterLink6 connected to the network.

As the client PC, Windows XP/Vista/7/8.1/10 and Macintosh can be used.

This chapter assumes that JV400-LX was registered in the "Printer Management". When another printer is registered, make the settings with the different model name.

Changing OS Settings

Perform settings for the workgroup name to have the client PC participate in WORKGROUP. Consult with your network administrator about the network in use or if participating in a domain network.

Workgroup Settings (For Windows 10 / Windows 8.1 / Windows 7 / Windows Vista/ Windows XP)

The preset workgroup name in Windows 7 is "WORKGROUP2.

The following explains an example where the workgroup name is "XXXX" before the change, and is changed to "WORKGROUP".

1 Double click [System] in [Control Panel].

lows.

The following explains an example in Mac OSX 10.7. Unless otherwise specified, the procedure is the same in other OSs.

Hot folder setting by Finder

Use Finder to select an appropriate file server so that your Macintosh client PC can access the hot folder in the RasterLink6 PC.

Open [Go] - [Connect to Server] in 1 the [Finder].
